Tripod checklist.

| Section/Topic                |     | Checklist Item  | Page           |
|------------------------------|-----|---|----------------|
| <b>Title and abstract</b>    |     |   |                |
| Title                        | 1   | Identify the study as developing and/or validating a multivariable prediction model, the target population, and the outcome to be predicted.  | 1              |
| Abstract                     | 2   | Provide a summary of objectives, study design, setting, participants, sample size, predictors, outcome, statistical analysis, results, and conclusions.   | 2              |
| <b>Introduction</b>          |     |   |                |
| Background and objectives    | 3a  | Explain the medical context (including whether diagnostic or prognostic) and rationale for developing or validating the multivariable prediction model, including references to existing models.      | 5-7            |
|                              | 3b  | Specify the objectives, including whether the study describes the development or validation of the model or both.   | 1-7            |
| <b>Methods</b>               |     |   |                |
| Source of data               | 4a  | Describe the study design or source of data (e.g., randomized trial, cohort, or registry data), separately for the development and validation data sets, if applicable.                               | 7              |
|                              | 4b  | Specify the key study dates, including start of accrual; end of accrual; and, if applicable, end of follow-up.  | 7              |
| Participants                 | 5a  | Specify key elements of the study setting (e.g., primary care, secondary care, general population) including number and location of centres.  | 7              |
|                              | 5b  | Describe eligibility criteria for participants.   | 7              |
|                              | 5c  | Give details of treatments received, if relevant.   | n/a            |
| Outcome                      | 6a  | Clearly define the outcome that is predicted by the prediction model, including how and when assessed.  | 8              |
|                              | 6b  | Report any actions to blind assessment of the outcome to be predicted.  | 8              |
| Predictors                   | 7a  | Clearly define all predictors used in developing or validating the multivariable prediction model, including how and when they were measured.   | 8              |
|                              | 7b  | Report any actions to blind assessment of predictors for the outcome and other predictors.  | 8              |
| Sample size                  | 8   | Explain how the study size was arrived at.  | 9              |
| Missing data                 | 9   | Describe how missing data were handled (e.g., complete-case analysis, single imputation, multiple imputation) with details of any imputation method.  | 9              |
| Statistical analysis methods | 10c | For validation, describe how the predictions were calculated.   | 9, Supplement  |
|                              | 10d | Specify all measures used to assess model performance and, if relevant, to compare multiple models.   | 9, Supplement  |
|                              | 10e | Describe any model updating (e.g., recalibration) arising from the validation, if done.   | 9, Supplement  |
| Risk groups                  | 11  | Provide details on how risk groups were created, if done.   | n/a            |
| Development vs. validation   | 12  | For validation, identify any differences from the development data in setting, eligibility criteria, outcome, and predictors.   | Supplement     |
| <b>Results</b>               |     |   |                |
| Participants                 | 13a | Describe the flow of participants through the study, including the number of participants with and without the outcome and, if applicable, a summary of the follow-up time. A diagram may be helpful. | 10, Supplement |
|                              | 13b | Describe the characteristics of the participants (basic demographics, clinical features, available predictors), including the number of participants with missing data for predictors and outcome.    | 11             |
|                              | 13c | For validation, show a comparison with the development data of the distribution of important variables (demographics, predictors and outcome).  | Supplement     |
| Model performance            | 16  | Report performance measures (with CIs) for the prediction model.  | 13             |
| Model-updating               | 17  | If done, report the results from any model updating (i.e., model specification, model performance).   | 12-14          |
| <b>Discussion</b>            |     |   |                |

|                           |     |  |             |
|---------------------------|-----|--|-------------|
| Limitations               | 18  | Discuss any limitations of the study (such as nonrepresentative sample, few events per predictor, missing data).                               | 18-19       |
| Interpretation            | 19a | For validation, discuss the results with reference to performance in the development data, and any other validation data.                      | 17-18       |
|                           | 19b | Give an overall interpretation of the results, considering objectives, limitations, results from similar studies, and other relevant evidence. | 16-20       |
| Implications              | 20  | Discuss the potential clinical use of the model and implications for future research.  | 19-20       |
| <b>Other information</b>  |     |  |             |
| Supplementary information | 21  | Provide information about the availability of supplementary resources, such as study protocol, Web calculator, and data sets.                  | Through out |
| Funding                   | 22  | Give the source of funding and the role of the funders for the present study.  | 21          |

**Supplementary Table 2**

Crime/Home Office codes for included violent offences.

|        |     |  |
|--------|-----|--|
| 001/01 | 1   | Murder - victim one year of age or older   |
| 001/02 | 1   | Murder - victim under one year of age  |
| 002/00 | 2   | Attempt murder - victim aged under 1 year  |
| 002/00 | 2   | Attempt murder - victim aged 1 year or over  |
| 019/02 | 19A | Sex - Sexual intercourse with woman / girl mental defective  |
| 019/17 | 19H | Sex - Rape of a boy under 13 - SOA 2003  |
| 019/18 | 19E | Sex - Attempt rape of a girl under 13 - SOA 2003   |
| 019/19 | 19H | Sex - Attempt rape of a boy under the age of 13 - SOA 2003   |
| 021/02 | 21  | Sex - Offender of any age cause / incite a girl under 13 to engage in sexual activity - penetration - SOA 2003 |
| 021/12 | 21  | Sex - Offender under 18 engage in penetrative sexual activity with girl under 13 - SOA 2003                    |
| 021/13 | 21  | Sex - Offender under 18 engage in penetrative sexual activity with boy under 13 - SOA 2003                     |
| 021/14 | 21  | Sex - Offender under 18 cause / incite a girl under 13 to engage in sexual activity - penetration - SOA 2003   |
| 070/01 | 70  | Sex - Sexual activity with a mentally disordered male - penetration - SOA 2003                                 |
| 070/02 | 70  | Sex - Sexual activity with a mentally disordered female - penetration - SOA 2003                               |
| 070/05 | 70  | Sex - Cause / incite sexual activity with a mentally disordered male - penetration - SOA 2003                  |
| 070/06 | 70  | Sex - Cause / incite sexual activity with a mentally disordered female - penetration - SOA 2003                |
| 071/02 | 71  | Sex - Paying for the sexual services of a girl under 13 - penetration - SOA 2003                               |
| 071/03 | 71  | Sex - Paying for the sexual services of a boy under 13 - penetration - SOA 2003                                |
| 005/14 | 05E | Possess firearm with intent to endanger life   |
| 005/15 | 05E | Possess shotgun with intent to endanger life   |
| 005/07 | 05E | Cause explosion with intent to burn / maim / grievous bodily harm etc  |
| 005/10 | 05E | Administer poison with intent to endanger life / inflict grievous bodily harm                                  |
| 005/13 | 05E | Do an act with intent to cause an explosion likely to endanger life / injure property                          |
| 023/14 | 23  | Sex - Adult sexual activity with a girl under 13 family member - penetration - SOA 2003                        |
| 023/15 | 23  | Sex - Adult sexual activity with a boy under 13 family member - penetration - SOA 2003                         |
| 023/18 | 23  | Sex - Adult incite sexual activity with a girl under 13 family member - penetration - SOA 2003                 |
| 023/19 | 23  | Sex - Adult incite sexual activity with a boy under 13 family member - penetration - SOA 2003                  |
| 023/30 | 23  | Sex - Offender under 18 sexual activity with a girl under 13 family member - penetration - SOA 2003            |
| 023/31 | 23  | Sex - Offender under 18 sexual activity with a boy under 13 family member - penetration - SOA 2003             |
| 023/34 | 23  | Sex - Offender under 18 incite sexual activity with a girl under 13 family member - penetration - SOA 2003     |
| 023/35 | 23  | Sex - Offender under 18 incite sexual activity with a boy under 13 family member - penetration - SOA 2003      |
| 056/01 | 56A | Arson with intent to endanger life   |
| 071/12 | 71  | Sex - Control a child under 13 involved in prostitution / pornography - SOA 2003                               |
| 005/17 | 05E | Make use / attempt to make use of a firearm with intent to resist arrest                                       |
| 008/13 | 10A | Firearms - Possess firearm on arrest for Schedule 1 offence  |
| 008/13 | 10A | Firearms - Possess firearm while committing Schedule 1 offence   |
| 008/13 | 10A | Firearms - Possess imitation firearm on arrest for Schedule 1 offence  |
| 008/16 | 10A | Firearms - Have a firearm with intent to commit an indictable offence  |
| 008/16 | 10A | Firearms - Have an imitation firearm with intent to resist arrest  |
| 008/16 | 10A | Firearms - Have a firearm with intent to resist arrest   |
| 008/16 | 10A | Firearms - Have an imitation firearm with intent to commit an indictable offence                               |
| 008/23 | 10A | Firearms - Possession of imitation firearm with intent to cause fear of violence                               |

|        |            |   |
|--------|------------|---|
| 008/23 | 10A        | Firearms - Firearm - possession with intent to cause fear of violence   |
| 008/24 | 10A        | Firearms - Shotgun - possession with intent to cause fear of violence   |
| 019/07 | 19D        | Sex - Rape a girl aged 13 / 14 / 15 - SOA 2003  |
| 019/08 | 19C        | Sex - Rape a woman 16 years of age or over - SOA 2003   |
| 019/09 | 19G        | Sex - Rape a male under 16  |
| 019/10 | 19F        | Sex - Rape a man 16 or over - SOA 2003  |
| 019/11 | 19A        | Sex - Attempted rape of a female under 16   |
| 019/12 | 19C        | Sex - Attempt to rape a woman 16 or over - SOA 2003   |
| 019/13 | 19G        | Sex - Attempted rape of a male under 16 years of age  |
| 019/14 | 19F        | Sex - Attempt to rape a man aged 16 or over - SOA 2003  |
| 019/16 | 19E        | Sex - Rape a girl under 13 - SOA 2003<br>Sex - Offender of any age cause / incite a boy under 13 to engage in sexual activity - penetration - SOA   |
| 021/04 | 21         | 2003  |
| 021/06 | 21         | Sex - Offender 18 or over engage in penetrative sexual activity with girl under 13 - SOA 2003   |
| 021/07 | 21         | Sex - Offender 18 or over engage in penetrative sexual activity with boy under 13 - SOA 2003<br>Sex - Offender 18 or over cause / incite a girl under 13 to engage in sexual activity - penetration - SOA |
| 021/08 | 21         | 2003  |
| 021/09 | 21         | Sex - Offender 18 or over cause / incite a boy under 13 to engage in sexual activity - penetration - SOA<br>2003  |
| 021/15 | 21         | Sex - Offender under 18 cause / incite a boy under 13 to engage in sexual activity - penetration - SOA<br>2003  |
| 070/17 | 70         | Sex - Care worker engage in sexual activity with mentally disordered male - penetration - SOA 2003  |
| 070/18 | 70         | Sex - Care worker engage in sexual activity with mentally disordered female - penetration - SOA 2003  |
| 070/21 | 70         | Sex - Care worker cause / incite sexual activity with mental disordered person - penetration - SOA 2003   |
| 071/14 | 71         | Sex - Paying for the sexual services of a girl 13 to 15 - penetration - SOA 2003  |
| 071/15 | 71         | Sex - Paying for the sexual services of a boy 13 to 15 - penetration - SOA 2003   |
| 005/01 | 05D        | Assault - S18 - GBH grievous bodily harm with intent  |
| 005/01 | 05D        | Assault - S18 - GBH cause grievous bodily harm with intent to resist / prevent arrest   |
| 005/04 | 05E        | Attempt to choke / suffocate / strangle with intent   |
| 005/05 | 05E        | Administer drug with intent to commit an indictable offence<br>Firearms - Set a man trap with intent to inflict grievous bodily harm - Offences against the Person Act                                    |
| 008/03 | 10A        | 1861  |
| 017/14 | 17B        | Sex - Assault a boy under 13 by penetration with a part of your body / a thing - SOA 2003   |
| 020/04 | 20B        | Sex - Assault a girl under 13 by penetration with a part of your body / a thing - SOA 2003<br>Sex - Sexual activity with mentally disordered person by inducement / threat / deception - no penetration   |
| 070/12 | 70         | - SOA 2003  |
| 070/14 | 70         | Sex - Cause sexual activity with mentally disordered person by inducement / threat / deception - no penetration - SOA 2003  |
| 005/16 | 05E        | Possess air weapon with intent to endanger life   |
| 023/04 | 23         | Sex - Adult sexual activity with a girl 13 - 17 family member - penetration - SOA 2003  |
| 023/05 | 23         | Sex - Adult sexual activity with a boy 13 - 17 family member - penetration - SOA 2003   |
| 023/08 | 23         | Sex - Adult incite sexual activity with a family member - victim girl 13 to 17 - penetration - SOA 2003   |
| 023/09 | 23         | Sex - Adult incite sexual activity with a family member - victim boy 13 to 17 - penetration - SOA 2003  |
| 023/32 | 23         | Sex - Offender under 18 sexual activity with a girl 13 - 17 family member - penetration - SOA 2003  |

**Supplementary Table 3**

Predictor definitions pre-specified for extraction from electronic health records.

| <b>Predictor (code)</b>                               | <b>Definition</b>   | <b>Data recorded</b>                         |
|---|---|--|
| Age ( <i>Age</i> )                                    | Age at time of assessment.  | Age in years                                 |
| Sex ( <i>Sex</i> )                                    | Sex at birth.   | Male / female                                |
| Previous violent crime ( <i>PrevViol</i> )            | Any lifetime conviction for violence (assault with or without injury, homicide, robbery, arson, any sexual offence, illegal threats or intimidation). If not explicitly stated, but risk assessment identifies no history of risk towards others, recorded as 'No'. | Yes / No                                     |
| Previous drug misuse ( <i>PrevDrug</i> )              | Lifetime diagnosis drug use disorder, from documented diagnosis, or indicated by past contact with drug rehabilitation/treatment services or detailed history.  | Yes / No                                     |
| Previous alcohol misuse ( <i>PrevAlc</i> )            | Lifetime diagnosis alcohol use disorder, from documented diagnosis, or indicated by past contact with alcohol rehabilitation/treatment services or detailed history.  | Yes / No                                     |
| Previous self-harm ( <i>DSH</i> )                     | Lifetime episode of self-harm (any form, e.g. deliberate self-poisoning, cutting).  | Yes / No                                     |
| Highest education ( <i>Education</i> )                | Formal schooling: secondary (to age 16), upper secondary (to age 18), post-secondary (past 18).   | Secondary / Upper secondary / Post-secondary |
| Parental drug or alcohol misuse ( <i>ParentDrug</i> ) | Parental lifetime diagnosis of drug or alcohol use disorder (definitions as above for personal history).  | Yes / No                                     |
| Parental violent crime ( <i>ParentViol</i> )          | Parental lifetime conviction for a violent offence (defined as above for personal history). History of incarceration taken as a proxy of violent offending.   | Yes / No                                     |
| Sibling violent crime ( <i>SibViol</i> )              | Sibling lifetime conviction for a violent offence (defined as above). History of incarceration taken as a proxy of violent offending.   | Yes / No                                     |
| Current episode ( <i>Episode</i> )                    | Inpatient hospital admission or outpatient community patient at point of assessment.  | Inpatient / Outpatient                       |
| Recent antipsychotic treatment ( <i>Antipsych</i> )   | Prescribed and taken any antipsychotic drug in 6 months before assessment.  | Yes / No                                     |
| Recent antidepressant treatment ( <i>Antidep</i> )    | Prescribed and taken any antidepressant drug in 6 months before assessment.   | Yes / No                                     |
| Recent dependence treatment ( <i>Dependence</i> )     | Any pharmacological strategy to treat dependence (e.g. replacement therapy such as methadone) prescribed and taken in 6 months before assessment.   | Yes / No                                     |
| Personal income*                                      | Low: unemployed and/or inadequate financial situation   | Low / Stable                                 |

|                                       |   |          |
|---------------------------------------|---|----------|
| <i>(Incomecat)</i>                    | with difficulty meeting basic daily living needs (food, accommodation etc.). Otherwise, 'stable'. |          |
| Benefit recipient<br><i>(Benefit)</i> | Currently receiving social or disability benefits of any kind.                                    | Yes / No |

\*For personal income, the development study used deciles [1], but stakeholder work indicated this was clinically not feasible and it was simplified.

## Supplementary Methods 1

### *Choice of violent outcome measure*

Officially registered violent outcomes such as arrest or conviction offer an advantage over measures that rely on ongoing contact with mental health services, as this engagement may be disrupted as a consequence of developing the outcome. Official outcomes also avoid limitations of self-report scales. Conviction is the most robust measure, however there are practical limitations in a psychiatric population. Police-recorded occurrences of an individual having been arrested, charged and/or a suspect for a violent offence were used as these objectively capture a significant incident that is stressful, disruptive and stigmatising, and also consume both police resource and healthcare resource for potential future care. Relevant offence codes were pre-specified (Supplementary Table 2). Codes for offences pertaining to possession alone of a weapon (i.e. without any associated threats or assaultive behaviour as defined above) were not included, as these can occur secondary to proactive policing measures. To be included, the date of the incident (rather than the date of arrest or charge) must have been within 12 months of the EIP assessment.

It is also well recognised that significant violent incidents may occur which do not lead to police contact. Typically these can occur during acute-phase illness, such as during an inpatient hospital admission, where normal criminal proceedings may not be pursued. Nevertheless, such incidents are of clinical importance. To avoid missing such outcomes therefore, police data was supplemented by a focussed review of the 12 month period in question in the EHR to identify any relevant documented incidents. The threshold of severity for this was pre-specified as involving a weapon or documented physical injury.

### *Clinical judgement comparator*

If the summary did not mention risk to others, or referred to risk as “low” (including synonyms such as “absent”, “not identified”, “nil significant”, “no concern”), this was recorded as “not increased”. Alternatively, if 1) there was any documentation that risk to others was “moderate” or “high” (including synonyms “elevated”, “escalating”, “concerning”, “acute”, “unsafe”), 2) the categorical option in the risk assessment template was marked “risk identified”, or 3) there were features within the management plan specifically addressing violence risk (for example documentation of safety advice given to a relative on how to respond in the event of aggression), then risk was recorded as “increased”.

### *Data extraction*

If there was insufficient information to code a predictor, this was recorded “NA”. Data was extracted by one researcher (DW), and for a random sample of 20 individuals also blindly by a second researcher. Concordance was 90%-100% for all but three predictors (highest education [85%], sibling violent crime [85%] and parental violent crime [75%]). Discordance was around the threshold to code “NA” and was resolvable through discussion.

### *Missing data*

The approach of multiple imputation by chained equations is the recommended approach in current statistical literature, and even allows external validation in cohorts that do not include all the original predictors [2]. Alternatives such as complete-case analysis are recognised as unnecessarily inefficient as they can disregard a substantial amount of available data and introduce unwanted selection bias because only patients with complete data can be included in analysis [3]. Further, entirely excluding predictors with missing data from models would revert the study to development of a new model, ignoring valuable predictive information from the original model development. The imputation model included all other predictors and

the outcome. The plausibility of imputed datasets was checked by visually examining the distribution of predictors in observed and imputed data using stacked bar charts. The ability of pooling results from multiple imputations to give unbiased performance estimates and standard errors is well described [4].

## Supplementary Methods 2

### *Discrimination*

Discrimination is the ability of a model to separate (i.e. order correctly) any random pair of individuals with and without the outcome, and was quantified with the AUC (area under the receiver operating characteristic [ROC] curve), which for a binary outcome is identical to the concordance or c-statistic.[5] An AUC of 1 represents perfect discrimination, whereas 0.5 indicates a model that performs no better than chance.

### *Calibration*

Whilst discrimination is important, for a tool to be clinically usable it must also be adequately calibrated in external validation. Calibration is how well predictions match the observed data, i.e. do X% of individuals with a predicted risk of X% develop the outcome? Examining calibration in the current study is especially important, as the event rate was expected to differ from that in the development dataset.

Calibration was examined with 1) calibration-in-the-large (CITL) [6], which estimates the difference between the mean predicted outcomes and the mean observed outcomes where  $CITL < 0$  indicates that predicted probabilities are higher than observed proportions and vice versa, 2) the expected/observed ratio (E/O) [7], related to CITL but more intuitively summarising the ratio of the number predicted to have the outcome to the number observed to have the outcome, where 1 is perfect, 3) the calibration slope [6], where a calibration model is fitted and the slope coefficient indicates the degree of deviation from a perfect slope of 1 ( $< 1$  for an over-fitted model with predictions that are too extreme at low and high probabilities, and  $> 1$  for an under-fitted model), and 4) visual inspection of calibration plots, with predicted and observed probabilities plotted in decile risk groups.

For overall model performance (encompassing both discrimination and calibration), the Brier score was calculated [5]. This is the squared difference between binary outcomes and predictions, with range from 0 to 1 with better scores being closer to 0.

### *Model updating*

A stepwise approach was pre-specified [8]. First, baseline risk was adjusted by updating the model constant, bringing predicted and observed outcomes in line without affecting discrimination or predictor coefficients. Next, the calibration slope was used as a rescaling factor. The improvement in performance was examined to decide whether this rescaled model should be adopted in favour of the model with only the updated intercept (Supplementary Methods 3).

### *Clinical benefit*

Measures of discrimination or calibration alone give limited information on clinical value [9,10]. This was addressed by examining net benefit with decision curve analysis (DCA) [11-13], informed by recent clarifications of its interpretation [14,15]. This specifies an “exchange rate” which is the number of false positive predictions that are acceptable to “treat” one true positive. This subjective preference depends on the relative harms of misclassification and is plotted across a range. The net benefit of OxMIV and unstructured clinical judgement were compared to baseline strategies of “treating none” or “treating all”, as recommended for interpretation [14]. Intervening for all or no patients, irrespective of model results, may be reasonable clinical strategies and so, to justify clinical use, a model must be superior to both. For example, a poorly performing model may offer lower net benefit than offering a non-harmful intervention to all. For consistency and interpretation, for OxMIV, the exchange rate is the same as the cutoff for classifying “increased” risk.

### *Statistical analysis*

Analyses were undertaken with R version 4.1 [16].

### Supplementary Methods 3

#### *Model updating and statistical analyses*

The OxMIV model is expressed by the equation:

$$Y = A + B_1 * X_1 + B_2 * X_2 + \dots$$

Where  $Y$  is the linear predictor which is then converted to a probability scale by the logit link function,  $A$  is a constant (representing the Y-axis intercept),  $B$  is the regression coefficient for each predictor variable, and  $X$  is the predictor variable. All corresponding values for the OxMIV model are published in the derivation study [1] ( $-3.7273 + 0.8400 * \text{Male} - 0.0468 * \text{Age} + 1.6149 * \text{Previous violent crime} + \dots$ ).

To update the intercept of the model, linear predictors were first calculated with the intercept term removed, and then a logistic model fitted with these new linear predictors as the offset term. To update both intercept and slope, a logistic model was fitted using the linear predictors with the intercept removed as the only predictor.

Confidence intervals were calculated with the exact, conservative Clopper Pearson method for sensitivity/specificity and asymptomatic logit intervals for predictive values [17,18].

Confidence intervals were also reported for the incidence of violence in the cohort using the Wilson method [19], as this may inform future work.

Decision curve analysis was undertaken using the rmda package [20]. Missing data was visualised with the packages Hmisc [21], mice [22] and VIM [23], and generalised linear models were fitted to examine associations with missingness of a predictor as a binary dependent variable. The mice [22] package was used for multiple imputation and subsequent pooled analyses, specifying logistic regression for imputation of binary data and a multinomial logit model for imputation of education (factor with >2 levels). Analyses of complete datasets were undertaken with the packages pROC [24], DescTools [25] and caret

[26], with performance measures reported where applicable as pooled point estimates with 95% confidence intervals derived from total variance across individual analyses of complete imputed datasets.

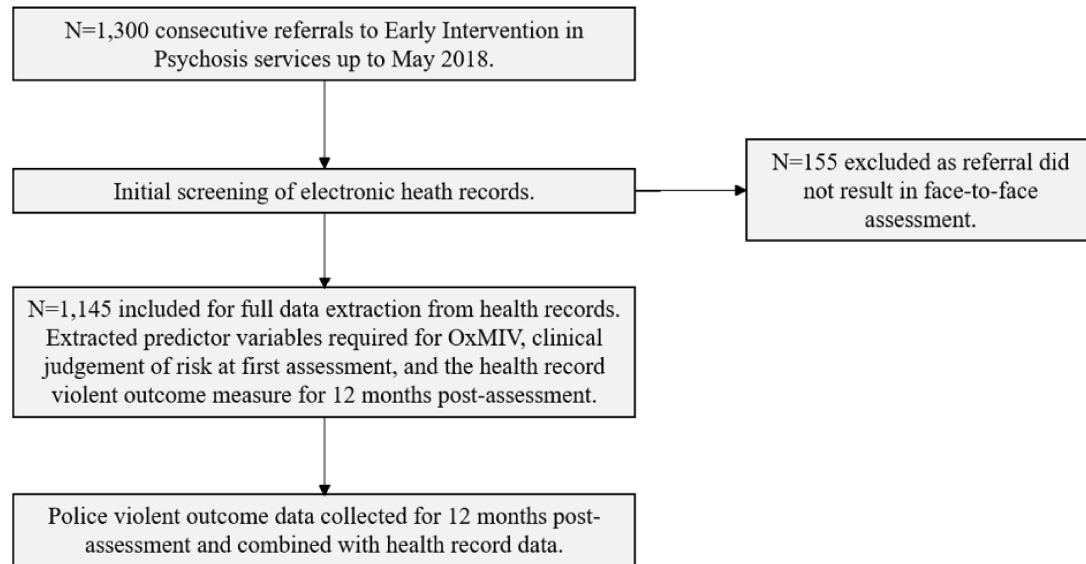

## **Supplementary Methods 4**

### *Public and patient involvement*

Efforts were made to test the methodology of this study with a wide range of public and patient representatives. The primary focus of this public and patient involvement was to test the acceptability of the methodology of using routine health record data. Input also assisted in producing the patient-facing documentation, which was limited to a poster communicating the study activity and the mechanism for dissent that was displayed in relevant patient areas. Over the course of the different stages of design and approval, 17 individuals were involved. This included carers and individuals with personal experience of EIP and forensic mental health services. There was positivity around the potential clinical applicability of the work. The importance of the information security safeguards, particularly the interface with police, was highlighted by representatives, who were reassured by the formal frameworks in place.

**Supplementary Figure 1**

Flow chart of study processes.

**Supplementary Table 4**

Distribution of outcome and predictors in validation cohort and Swedish development sample.

| <b>Predictor</b>                       | <b>Validation cohort<br/>(n=1,145)</b> | <b>Development<br/>sample[1]<br/>(n=58,771)</b> |

| <i>Missing</i>                         | 59 (5%)                                |   |

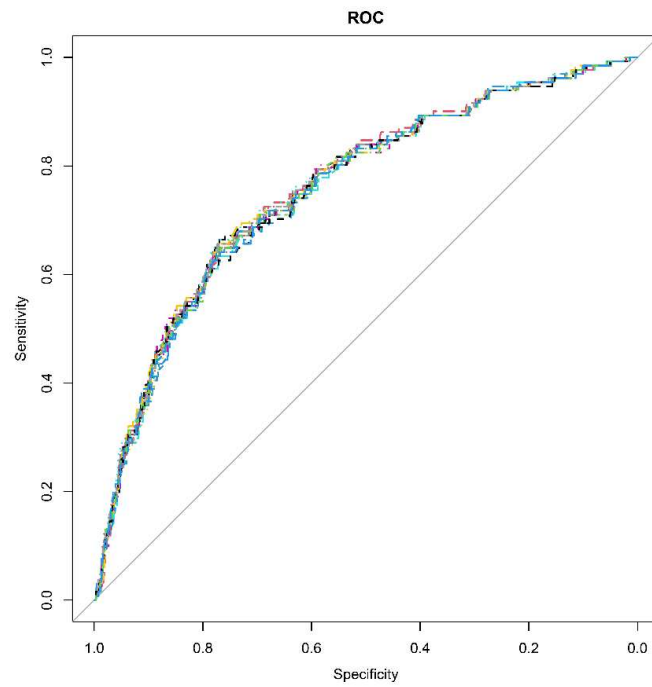

## Supplementary Results 1

### *Missing data*

In 950 cases (83%), two or fewer of the 16 predictors were missing, and 471 (41%) were complete cases with no missing data. Examining the patterns of missingness among predictors showed that the family history items tended to be missing together; the most frequent overlap was for sibling violence and parental violence, which were both missing in 32% of cases. Clinically, it is plausible that the missingness of these two family history items depended on the level of detail of the assessment, rather than the missing value itself (i.e. a missing at random [MAR] pattern). Further, it would be expected that family history items would be less complete in older individuals (an observed variable), and more complete in individuals whose reference episode is a hospital admission (also an observed variable), as this typically means a fuller admission summary is documented with mandatory components. Margin plots showing the distribution of age when each of four predictors were either observed or missing (sibling violence, parental violence, parental drug and alcohol use and education) were in line with individuals with unobserved predictors tending to be older, in keeping with MAR. Generalised linear models showed that missingness of education and the three family history items was positively associated with age (i.e. older individuals were more likely to have these predictors missing, likely due to not being assessed to the same level of detail as younger persons for these factors), violating the missing completely at random (MCAR) assumption but in keeping with MAR.

**Supplementary Figure 2**

**Supplementary Table 5**

Externally validated model with updated intercept (constant) and p values from univariable analysis of external validation dataset.

| <b>Predictor</b>                | <b>Coefficient</b> | <b>p value in external validation cohort</b> |
|---------------------------------|--------------------|--|
| Constant                        | -1.7314            | -  |
| Male sex                        | 0.8400             | <b>&lt;0.001</b>                             |
| Age                             | -0.0468            | <b>&lt;0.001</b>                             |
| Previous violent crime          | 1.6149             | <b>&lt;0.001</b>                             |
| Previous drug use               | 0.3737             | <b>&lt;0.001</b>                             |
| Previous alcohol use            | 0.5603             | 0.282  |
| Previous self-harm              | 0.2049             | 0.297  |
| Highest education               |                    | <b>&lt;0.001</b>                             |
| Upper-secondary                 | -0.1264            |  |
| Post-secondary                  | -0.0703            |  |
| Parent drug or alcohol use      | 0.1044             | <b>0.003</b>                                 |
| Parent violent crime            | 0.1464             | <b>0.002</b>                                 |
| Sibling violent crime           | -0.1076            | <b>0.016</b>                                 |
| Recent antipsychotic treatment  | -0.4708            | 0.645  |
| Recent antidepressant treatment | -0.2209            | 0.349  |
| Recent dependence treatment     | 0.5783             | 0.669  |
| Current episode inpatient       | 0.3143             | 0.057  |
| Benefit recipient               | 0.3508             | <b>0.035</b>                                 |
| Income category stable          | -0.1642            | <b>&lt;0.001</b>                             |

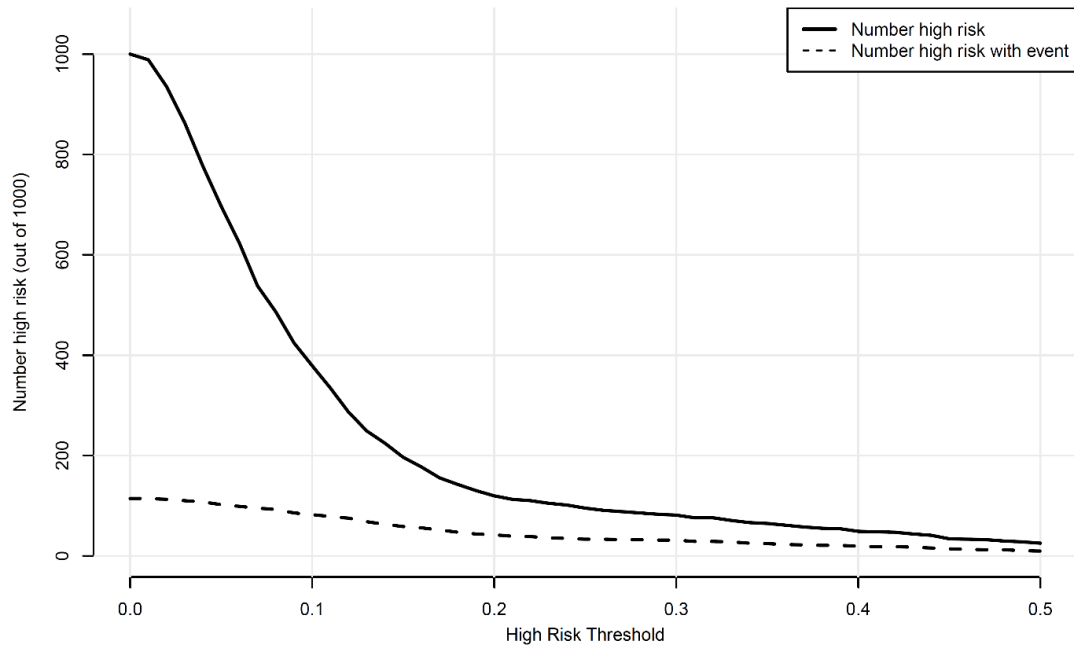

**Supplementary Table 6**

Paired misclassification measures for updated OxMIV model across range of cutoffs in one imputed dataset (note that final values in the main paper present pooled estimates from all imputed datasets).

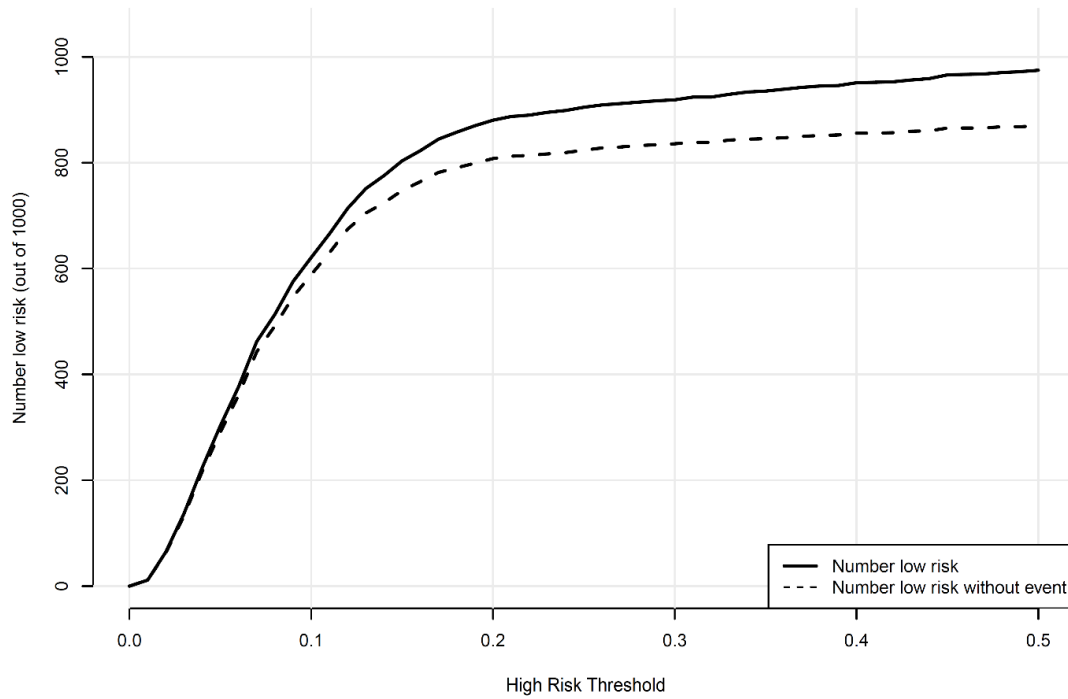

|                         | 2.5%                | 5.0%                | 7.5%                | 10.0%               | 12.5%               | 15.0%               | 20.0%               |
|-------------------------|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|
| Sensitivity<br>(95% CI) | 0.98<br>(0.93-1.0)  | 0.89<br>(0.83-0.94) | 0.83<br>(0.76-0.89) | 0.72<br>(0.63-0.79) | 0.63<br>(0.54-0.71) | 0.51<br>(0.42-0.60) | 0.37<br>(0.28-0.46) |
| Specificity<br>(95% CI) | 0.11<br>(0.09-0.13) | 0.33<br>(0.30-0.36) | 0.53<br>(0.50-0.56) | 0.66<br>(0.63-0.69) | 0.78<br>(0.75-0.81) | 0.84<br>(0.82-0.87) | 0.91<br>(0.89-0.93) |
| PPV<br>(95% CI)         | 0.12<br>(0.12-0.13) | 0.15<br>(0.14-0.16) | 0.19<br>(0.17-0.20) | 0.22<br>(0.19-0.24) | 0.27<br>(0.23-0.30) | 0.30<br>(0.25-0.34) | 0.35<br>(0.28-0.42) |
| NPV<br>(95% CI)         | 0.97<br>(0.92-0.99) | 0.96<br>(0.94-0.98) | 0.96<br>(0.94-0.97) | 0.95<br>(0.93-0.96) | 0.94<br>(0.93-0.95) | 0.93<br>(0.92-0.94) | 0.92<br>(0.91-0.93) |

**Supplementary Figure 4**

- a) Relationship between individuals identified as high risk and true positives across range of cutoffs from 0%-50%.

- b) Relationship between individuals identified as low risk and true negatives across range of cutoffs from 0%-50%.

**Supplementary Table 7**

- a) 2x2 table showing correspondence between categorical OxMIV rating at the 10% cutoff in one imputed dataset and the original clinical judgement made by the assessing clinician for the 131 individuals with at least one violent outcome during 12-month follow-up.

| <b>Clinical judgement</b>        | <b>OxMIV Score</b>           |                        |     |
|----------------------------------|------------------------------|------------------------|-----|
|                                  | Increased risk at 10% cutoff | Low risk at 10% cutoff |     |
| Risk identified at assessment    | 41                           | 11                     | 52  |
| No risk identified at assessment | 53                           | 26                     | 79  |
|                                  | 94                           | 37                     | 131 |

- b) 2x2 table showing correspondence between categorical OxMIV rating at the 10% cutoff in one imputed dataset and the original clinical judgement made by the assessing clinician for the 1,014 individuals with no violent outcomes during 12-month follow-up.

| <b>Clinical judgement</b>        | <b>OxMIV Score</b>           |                        |      |
|----------------------------------|------------------------------|------------------------|------|
|                                  | Increased risk at 10% cutoff | Low risk at 10% cutoff |      |
| Risk identified at assessment    | 67                           | 48                     | 115  |
| No risk identified at assessment | 273                          | 626                    | 899  |
|                                  | 340                          | 674                    | 1014 |
